8M21
PowerKit ESP/PRP/DCP Diesel Engine
ESP/PRP/DCP Diesel Engine

**8M21**

**Bore & Stroke (mm)** 127 x 165  
**Displacement (L)** 16.72  
**N° of Cylinders** 8  
**Cylinders Arrangement** In line  
**Fuel System** Mechanical  
**Governor (Gov.)** Electronic  
**Aspiration (Asp.)** Turbocharged & air-to-air cooled

---

**Customer benefits**

- Warranty terms - 2 yrs unlimited hours PRP, 4 yrs / 800 ESP
- 50°C Cooling package standard with low derating
- Extended mean time between overhauls (MTBO)
- Dual Speed Engine

---

*Please note that models ending with S are switchable 50/60 Hz engines.*

---

### Standard Equipment

**Engine and block**
- Cast iron frame style body structure
- One-piece forged crankshaft
- Split-cap forged steel connecting rods
- Separate cast iron cylinder heads with 4 valves
- Replaceable dry cylinder liners
- Aluminum alloy pistons with oil cooling gallery

**Cooling System**
- Radiator and hoses supplied separately
- Thermostatically-controlled system with belt driven coolant pump and pusher fan
- High water temperature sensor

**Lubrication system**
- Flat bottom large capacity oil pan
- Spin-on full-flow lube oil filter
- Low oil pressure sensor

**Fuel System**
- P type fuel injection pump and injector for higher inject pressure, for engines with electronic governor
- High pressure Common Rail injection system, for engines with ECU
- Duplex fine filter and water separation filter assembly with transparent cup for better efficiency

**Air intake and exhaust system**
- Special rear mounted air filter with restriction indicator
- Exhaust manifold shield for heat isolating

**Electrical System**
- 24 Vdc electric starter motor and battery charging alternator

**Flywheel and housing**
- SAE 1 flywheel housing and 14” flywheel

---

*Please note that models ending with S are switchable 50/60 Hz engines.*
Ratings definitions

Emergency Standby Power (ESP)

Emergency Standby Power is the maximum power available for a varying load for the duration of a main power network failure. The average load factor over 24 hours of operation should not exceed 70% of the engine’s ESP power rating. Typical operational hours of the engine is 200 hours per year, with a maximum usage of 500 hours per year. This includes an annual maximum of 25 hours per year at the ESP power rating. No overload capability is allowed. The engine is not to be used for sustained utility paralleling applications.

Data Centre Power (DCP)

Data Centre Power is defined as being the maximum power which a generating set is capable of delivering while supplying a variable or continuous electrical load and during unlimited run hours. Depending on the sites to supply and the availability of reliable utility, the generating set manufacturer is responsible to define what power level he is able to supply to fulfil that requirement including hardware or software or maintenance plan adaptation.

Prime Rated Power (PRP)

Prime Power is the maximum power available for unlimited hours of usage in a variable load application. The average load factor should not exceed 70% of the engine’s PRP power rating during any 24 hour period. An overload capability of 10% is available, however, this is limited to 1 hour within every 12 hour period.

1) All ratings are based on operating conditions under ISO 8528-1, ISO 3046, DIN6271. Performance tolerance of ±5%.
2) Test conditions: 100 kPa, 25°C air inlet temperature, relative humidity of 30%, with fuel density 0.84 kg/L.
   Derating may be required for conditions outside these; please contact the factory for details.
