* Different voltage output can be provided with different alternator, please contact Baudouin representative

DCR RATING

The generator set is capable of providing emergency backup power at the nameplate rating for the duration of an outage. The average load factor of DCR rated generator set should be no more than 85% of the nameplate rating with varying loads.

A DCR generator set can run for a maximum of 500 hours per year.

Data Center Rating pre-approved by UPTIME INSTITUTE for TIER III & TIER IV Data Center.

DCP RATING

Data centre power is defined as being the maximum power which a generating set is capable of delivering while supplying a variable or continuous electrical load and during unlimited run hours. Depending on the sites to supply and the availability of reliable utility, the generating set manufacturer is responsible to define what power level he is able to supply to fulfil that requirement including hardware or software or maintenance plan adaptation.

NOTE: The engine driven alternating current generating set is a reliable source of power for the data centre and it can be also used to back up a reliable utility. Prolonged operation at load in parallel with a utility is not permitted. An overload capability of 10% is available, however, this is limited to 1 hour within 12 hour period.
